LanguaL™

International Framework for Food Description

- *Langua Alimentaria*
- Controlled vocabulary for systematic food description
- Multilingual thesaural system using faceted classification
- Standard, controlled terms grouped in facets characteristic of the nutritional and/or hygienic quality of a food
- Language-independent
- Created for use in numerical databases

Principles behind the LanguaL™ thesaurus

Based on the concept that:

- Any food (or food product) can be systematically described by a **combination of characteristics**
- These characteristics can be categorized into **viewpoints** and **coded for computer processing**
- The resulting viewpoint/characteristic codes can be used to **retrieve data** about the food from external databases

LANGUAL™ - THE INTERNATIONAL FRAMEWORK FOR FOOD DESCRIPTION

Updated 2014-03-30

LanguaL™ is a Food Description Thesaurus

LanguaL™ stands for "**Langua aL**imentaria" or "language of food". It is an automated method for describing, capturing and retrieving data about food. The work on LanguaL™ was started in the late 1970's by the Center for Food Safety and Applied Nutrition (CFSAN) of the United States Food and Drug Administration as an ongoing co-operative effort of specialists in food technology, information science and nutrition.

Since then, LanguaL™ has been developed in collaboration with the US National Cancer Institute (NCI), and, more recently, its European partners, notably in France, Denmark, Switzerland and Hungary. Since 1996, the European LanguaL™ Technical Committee has administered the thesaurus.

The thesaurus provides a standardised language for describing foods, specifically for classifying food products for information retrieval. LanguaL™ is based on the concept that:

- Any food (or food product) can be systematically described by a combination of characteristics
- These characteristics can be categorised into viewpoints and coded for computer processing
- The resulting viewpoint/characteristic codes can be used to retrieve data about the food from external databases

LanguaL™ is a multilingual thesaural system using faceted classification. Each food is described by a set of standard, controlled terms chosen from facets characteristic of the nutritional and/or hygienic quality of a food, as for example the biological origin, the methods of cooking and conservation, and technological treatments.

One problem concerning multilingual thesauri is the multiplicity of natural languages: corresponding terms of different languages are not always semantically equivalent. It was chosen to render LanguaL™ language-independent, to be used in the USA and Europe for numeric data banks on food composition (nutrients and contaminants), food consumption and legislation. Each descriptor is identified by a unique code pointing to equivalent terms in different languages (e.g. Czech, Danish, English, French, German, Italian, Portuguese, Spanish and Hungarian).

LanguaL™ thus facilitates links to many different food data banks and contributes to coherent data exchange. LanguaL is the only generally recognised method in common use for describing, capturing and retrieving data about food, adapted to computerised national and international food composition and consumption databanks.

About 35000 foods in food composition databases LanguaL™ indexed

More than 27000 foods in European food composition databases are now LanguaL™ indexed to facilitate search and retrieval in the context of the EuroFIR eSearch Prototype facility, and currently the EuroFIR FoodExplorer. In addition, the USDA National Nutrient Database for Standard Reference is now partly LanguaL™ indexed. The indexing files are available from the USDA ARS Nutrient Data site.

In total, more than 35000 European, North American foods and foods from other countries are now LanguaL™ indexed.

FACET M. CONTAINER OR WRAPPING

- **INDEXING TIPS**

- Choose a **material** term over a **form** term
 - E.g. for “Olive oil in glass bottle” *GLASS CONTAINER* is more precise than *BOTTLE OR JAR*.
- The "**canning**" procedure does not strictly imply a **metal container**. Foods are canned into metal containers, glass jars or plastic bottles.
- Such **outside surfaces as sausage casings** and **waxing** of fruits or vegetables are not considered containers
- Index **all known containers**

Example: *Yoghurt, whole milk, with strawberries, sweetened*
